Principal DevOps Engineer

SYED USMAN AHMAD

PROFESSIONAL SUMMARY

Principal DevOps Engineer with expertise in cloud architecture and container orchestration. AWS Community Builder with 10+ years of comprehensive experience in cloud infrastructure, DevOps automation, and enterprise architecture. Recognized technical leader and educator who has trained 500+ professionals in AWS and DevOps practices. Active speaker at AWS Community, Kubernetes (Linux Foundation), and Google GDG Cloud events. Proven expertise in designing and implementing highly scalable, secure, and cost-optimized solutions on the AWS cloud platform with demonstrated leadership in mentoring engineering teams and delivering cloud transformation initiatives.

EMPLOYMENT HISTORY

Jan 2023 – Present

Principal DevOps Engineer - 10Pearls , Lahore, Pakistan

- Lead and mentor a team of 5 DevOps engineers through weekly 1-on-1s, code reviews, and progressive learning tasks covering AWS, Kubernetes, and infrastructure automation
- Conduct monthly training sessions on cloud technologies and DevOps best practices, deliver company-wide technical talks on architecture patterns and cost optimization
- Architect end-to-end AWS infrastructure for multiple projects following Well-Architected Framework principles; create comprehensive architecture diagrams for client solutions
- Design and deploy microservices on AWS ECS Fargate, managing 100+ containerized services with auto-scaling and high availability
- Implement multi-account AWS strategy using Control Tower and Landing Zone for governance and security
- Develop modular Terraform IaC templates, reducing deployment time by 60%, and establish GitOps workflows with Jenkins & GitHub Actions for automated CI/CD pipelines
- Reduce infrastructure costs by 35% through right-sizing, reserved instances, and AWS Savings Plans optimization
- Design disaster recovery strategies achieving RPO < 15 minutes and RTO < 1 hour. Implement comprehensive CloudWatch monitoring with automated remediation
- DevSecOps practices integrating security scanning (SonarQube) into CI/CD pipelines
- Successfully delivered 8+ enterprise cloud projects with 99.9%+ uptime SLA, reduced MTTR (Mean Time to Recovery) by 45% through improved monitoring and incident response
- Optimized cloud resource allocation to lower operational costs while maintaining high availability and responsiveness across multiple client environments.

Jun 2021 – Jan 2023

Staff Engineer - 10Pearls

- Architected a complete microservices ecosystem on AWS EKS for an IoT-based solar energy management platform
- Designed multi-environment Kubernetes infrastructure (DEV, Staging, Production) using Terraform modules.
- Established AWS multi-account strategy with cross-account IAM roles and SCPs; configured Kubernetes RBAC and Network Policies
- Developed Python Lambda functions for automated IAM credential rotation and EC2 scheduling, saving \$2,500/month in non-production costs
- Built serverless data processing pipelines using Lambda, S3, EventBridge, and Step Functions for real-time telemetry processing
- Authored 25+ Jenkins pipelines in Groovy, reducing pipeline execution time by 40% through parallel builds and Docker caching

Nov 2020 – Jun 2021

Senior DevOps Engineer - 10Pearls

- Designed AWS cloud infrastructure using Terraform including VPC, EC2 auto-scaling, RDS multi-AZ, and S3 lifecycle policies

- Developed reusable Terraform modules adopted across 5+ projects, reducing deployment errors by 70%
- Implemented Ansible playbooks for configuration management and automated patching across 50+ servers
- Led 6-month Azure DevOps transformation: integrated Azure AD with Okta for SSO/MFA; automated iOS/Android release pipelines, reducing cycles from days to hours
- Managed production Kubernetes clusters with 50+ pods; implemented HPA and Cluster Autoscaler for dynamic scaling
- Configured persistent volumes using AWS EBS and EFS; established monitoring with Prometheus and Grafana

Jan 2020 – Nov 2020

Solutions Architect - IbisTech

- Led migration of 15+ WordPress and PHP applications to AWS with almost zero-downtime cutover
- Designed scalable architectures using ALB, CloudFront CDN, RDS read replicas, and Auto Scaling
- Implemented AWS Certificate Manager for SSL/TLS automation and AWS SES for transactional email delivery
- Developed and delivered AWS certification training (Solutions Architect & Developer Associate) and comprehensive DevOps curriculum
- Trained 50+ professionals with a 95% certification pass rate through hands-on labs and real-world scenarios

Mar 2019 – Dec 2019

DevOps Engineer - Arbisof

- Established CI/CD infrastructure using Jenkins, Docker, and Ansible on AWS EC2 instances with automated build agents
- Deployed applications using AWS Elastic Beanstalk, implementing blue-green deployment strategies for zero-downtime releases
- Automated PostgreSQL and MySQL database backup workflows to S3 with encryption, lifecycle policies, and cross-region replication
- Implemented centralized logging using ELK Stack (Elasticsearch, Logstash, Kibana) and AWS CloudWatch Logs for 50+ applications
- Created CloudWatch dashboards and alarms for proactive monitoring of application and infrastructure health with PagerDuty integration

Dec 2013 – Apr 2019

Sr. VoIP Engineer - IBEX.Co

- Designed and deployed distributed VoIP infrastructure supporting 1,000+ concurrent calls across multiple geographic locations
- Led cloud migration initiative, moving on-premises VoIP systems to AWS cloud achieving 40% operational cost reduction
- Implemented call recording storage solution using AWS S3 with intelligent tiering and Glacier archiving for compliance and cost optimization
- Established monitoring framework using Nagios and AWS CloudWatch for comprehensive VoIP infrastructure health metrics
- Managed SIP trunking, Cisco CUCM (Call Manager)

Dec 2013 – Apr 2019

VoIP Engineer - IBEX.Co

- Provided Tier 2/3 technical support for Cisco Contact Center applications and SIP gateways serving 500+ agents
- Configured IP-PBX systems, dial plans, IVR flows, and conferencing infrastructure using Cisco
- Implemented call routing strategies and workforce optimization solutions, improving contact center efficiency

Jul 2013 – Dec 2013

Jr VoIP Engineer - Hadi Telecom

- Configured and maintained Asterisk-based PBX systems, including voicemail, call queues, and IVR menus
- Performed real-time monitoring and troubleshooting of VoIP services, ensuring 99.5% uptime
- Deployed Asterisk servers and integrated Cisco voice gateways in telecom data centers

CERTIFICATIONS

• Certified Kubernetes Administrator (CKA)	Advanced	• AWS Certified Cloud Practitioner	Beginner
• AWS Certified Solutions Architect Associate	Candidate ID: AWS00306962	• AWS Certified Solutions Architect Professional	Validation ID: TSQTE68LNE4Q1YS5
• AWS Technical Professional (AWS APN Partner)	Advanced
