

Muhammad Usama Shaukat

Senior DevOps Engineer | Cloud Infrastructure | CI/CD | AWS

m.7.usama@gmail.com | +92-346-7600-967 | linkedin.com/in/muhammad-usama-shaukat-38897a115 | Lahore, PK

PROFESSIONAL SUMMARY

Senior DevOps Engineer with 4+ years of hands-on experience architecting and managing cloud infrastructure on AWS, delivering zero-downtime CI/CD pipelines, and driving a 15% cloud cost reduction. Proven technical decision-maker, evaluating infrastructure solutions, leading architecture discussions, and mentoring junior engineers. Skilled across Docker/ECS, Terraform IaC, RDS/Aurora, ElastiCache/Redis, RabbitMQ and end-to-end observability stacks. Adept at transforming legacy VM-based architectures into modern containerized and scalable cloud-native deployments.

CORE COMPETENCIES & TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, ECS Fargate, RDS, Aurora, ElastiCache, Lambda, S3, EFS, AWS Backups, CloudWatch, EventBridge, SNS, VPC, IAM, ECR, CodePipeline, CodeBuild, CodeDeploy, ACM, Secrets Manager, Session Manager, Workspaces), DigitalOcean

Infrastructure as Code: Terraform

Containerization & Orchestration: Docker, AWS ECS (Fargate), Amazon ECR

CI/CD & Automation: AWS CodePipeline, AWS CodeDeploy, Jenkins, GitHub Actions

Databases & Clustering: MySQL, MariaDB, AWS RDS Aurora (Multi-AZ, Read Replicas, RDS Proxy), Galera Cluster

Caching & Messaging: AWS ElastiCache (Redis), RabbitMQ

Monitoring & Observability: Grafana, Prometheus, Loki, Promtail, AWS CloudWatch

Security & Networking: Cloudflare (WAF, DDoS, SSL/TLS, DNS), AWS VPC, IAM, Security Groups

Virtualization: VMware vCenter, ESXi 6.5, On-premises staging environments

PROFESSIONAL EXPERIENCE

Senior DevOps Engineer (Remote) | Omakoeion Services Ltd

Mar 2024 - Present

- Led infrastructure architecture discussions and sprint planning sessions, translating business requirements into scalable cloud designs and cost optimization strategies, mentored junior engineers on DevOps workflows, AWS services, and CI/CD best practices while conducting configuration and code reviews.
- Architected and managed multi-environment AWS infrastructure (Stage, Sandbox, Production) across 15+ services like EC2, ECS, RDS, ElastiCache/Redis, Lambda, S3, EFS, AWS Backups, CloudWatch, EventBridge, SNS, VPC, IAM, ACM, Secrets Manager, and Session Manager, improving deployment reliability and cutting monthly cloud costs through right-sizing.
- Designed and administered AWS RDS (MySQL/Aurora) with Multi-AZ failover, automated backups, read replicas, RDS Proxy, and query-level performance tuning via Database Insights, achieving 99.9% database uptime and measurable query load reduction.
- Containerized PHP Laravel applications with Docker, published images to Amazon ECR, and automated deployments to AWS ECS (Fargate) via CodePipeline and CodeDeploy, achieving zero-downtime releases and reducing average deployment time by ~60%.
- Automated cloud infrastructure provisioning across 7 projects using Terraform IaC, reducing environment spin-up time from days to under 50 minutes and ensuring 100% configuration consistency.
- Deployed and tuned AWS ElastiCache (Redis) for in-memory caching and session storage, reducing database read load by ~35% and improving average API response times.
- Deployed and managed RabbitMQ for asynchronous background job processing and service-to-service communication, decoupling application components and ensuring reliable message delivery.

- Built CI/CD pipelines with AWS CodePipeline, CodeBuild, and CodeDeploy, reducing average deployment cycle time by 40% and eliminating manual deployment steps across all environments.
- Hardened application security by configuring Cloudflare WAF rules, DDoS protection, SSL/TLS encryption, and DNS routing, achieving 100% HTTPS coverage and zero post-deployment security incidents.

DevOps Engineer (Freelance) | Omakoeion Services Ltd

Mar 2023 - Mar 2024

- Deployed and maintained a dedicated Stage environment for QA and debugging, decoupling testing from production and accelerating release confidence cycles.
- Designed and implemented CI/CD pipelines using Jenkins and AWS CodeDeploy, automating code delivery from GitHub to EC2, reducing manual release effort by 100%.
- Built end-to-end observability using Grafana, Prometheus, Promtail, and Loki, enabling real-time system health visualization, log aggregation, and proactive incident alerting.

DevOps Engineer | Cartlow.com

Sep 2022 - Dec 2023

- Managed global network infrastructure across AWS and DigitalOcean, supporting high-availability e-commerce operations across multiple regions.
- Executed cloud cost optimization that identifying idle resources, right-sizing instances, and consolidating workloads, delivering ~15% reduction in total cloud spend within 3 months.
- Built and maintained CI/CD pipelines using Jenkins and GitHub Actions for containerized PHP, React+Node, and Python applications, accelerating delivery cadence and eliminating manual deployment steps.
- Configured Galera Cluster for MariaDB, achieving synchronous multi-master replication, high availability, and zero data loss for critical database deployments.
- Established on-premises virtualized staging environment using VMware vCenter and ESXi 6.5, enabling production-parity testing without cloud cost overhead.
- Administered AWS services including EC2, ECS, ELB, S3, IAM, and VPC, implemented Cloudflare SSL/TLS configurations and deployed Nginx/Apache as reverse proxies with SSL termination.
- Implemented advanced monitoring and alerting with Grafana and Prometheus, building dashboards for infrastructure health, application performance.

IT Engineer Networks | Gourmet News Network

Jun 2020 – Oct 2021

- Designed and implemented core network using Cisco Nexus 5672 with fabric extenders (C2348TQ, C2348TP-E) and C2960X access switches at HQ, deployed C3850 core + C2960X access architecture across bureaus.
- Deployed high-throughput wireless network using Ubiquiti UniFi AP-AC-LR with UniFi Controller, improving wireless coverage and management visibility.
- Deployed Sophos XG 210 and FortiGate 300E firewalls in High Availability mode, strengthening perimeter security and ensuring network uptime.
- Configured and maintained VMware ESXi 6.5 hypervisor environment and implemented Elastix PBX with Cisco, Fanvil, and Grandstream IP Phones for enterprise VoIP.
- Monitored network performance end-to-end using PRTG, Cacti, The Dude, and FortiAnalyzer.

Network & System Engineer | Vision Telecom

Mar 2017 – Dec 2019

- Managed a team of network professionals responsible for designing, technical pre-sales, and IP operations for Layer-2/Layer-3 data and internet circuits.
- Provided 24/7 Level-1 and Level-2 support to customers and internal departments, maintaining SLA compliance across critical network infrastructure.
- Administered Windows Server 2008/2012 and Active Directory environments including DHCP, Group Policy, and enterprise domain security policies.
- Deployed and managed pfSense firewall with comprehensive security policies, designed VLAN-based networks using Cisco Catalyst 3750/3550/2960/2950 series switches.

IT Support Engineer | Omega International Consultant

Oct 2014 – Jul 2016

- Installed, configured and maintained servers, workstations, and peripherals, administered LAN environment.
 - Managed domain accounts, network printers, file sharing, and email accounts, handled system administration, networking, and troubleshooting.
-

KEY PROJECTS

Project 1 - PHP Laravel on EC2 (VM-Based Architecture)

- Deployed and operated a production-grade PHP Laravel application on AWS EC2, built end-to-end CI/CD pipeline using Jenkins + AWS CodeDeploy, reducing release time by 50% through full automation from GitHub to EC2.
- Configured Application Load Balancer (ALB) with health checks, Auto Scaling Groups, and Security Groups, implemented rolling CodeDeploy strategies enabling zero-downtime deployments across all production releases.
- Managed AWS EC2, S3, IAM, and RDS with CloudWatch monitoring and alerting for production stability and incident response.

Project 2 - Containerized Laravel on AWS ECS (Microservices Architecture)

- Led migration from EC2-based deployment to Docker + AWS ECS (Fargate) microservices architecture, improving scalability, fault isolation, and infrastructure reliability.
- Built fully automated CI/CD pipeline with AWS CodePipeline and CodeBuild, reducing deployment lead time by 45% and enabling on-demand, self-service releases.
- Configured ALB for intelligent traffic routing with auto-scaling policies to handle variable workloads, integrated CloudWatch + Grafana for real-time container health monitoring.

Project 3 - Multi-Region Infrastructure with Terraform (IaC)

- Designed reusable Terraform modules for VPC, EC2, RDS, ECS, and ElastiCache provisioning, enabling consistent multi-region deployments across staging, Sandbox and production environments.
- Implemented remote state management with S3 and DynamoDB locking, ensuring safe concurrent Terraform operations, reduced infrastructure provisioning time by over 70% compared to manual provisioning.

Project 4 - Observability Stack (Grafana / Prometheus / Loki)

- Deployed a full-stack observability platform using Prometheus for metrics scraping, Loki + Promtail for log aggregation, and Grafana for unified dashboards and alerting across all environments.
- Created custom Grafana dashboards for ECS container health, RDS performance, and application error rates, configured alerting rules.

KEY ACHIEVEMENTS AT A GLANCE

- 15% cloud cost reduction at Cartlow through structured optimization strategy executed within first quarter.
- Zero-downtime deployments across all production environments via blue/green and rolling CodeDeploy strategies.
- ~35% database load reduction through AWS ElastiCache (Redis) in-memory caching layer implementation.
- 40–60% faster deployment cycles through end-to-end CI/CD automation (CodePipeline, CodeDeploy, Jenkins).
- Full infrastructure automation via Terraform IaC: environment spin-up time reduced from days to under 50 minutes.
- 100% HTTPS coverage and zero post-deployment security incidents via Cloudflare WAF and DDoS hardening.

CERTIFICATIONS

- AWS Certified DevOps Engineer – Professional
- AWS Certified Solutions Architect – Associate

EDUCATION

- *Bachelor's Degree in Information Technology | GC University Faisalabad | 2014*
