

Muhammad Awab Ahmed

DevOps Engineer

03411889638 - portfolio - muhammadawab82002@gmail.com - linkedin.com/in/muhammadawab - github.com/Muhammad-Awab

EDUCATION

Bachelor of Science in Computer Science

Sep 2021 - May 2025

Air University, Islamabad

TECHNICAL SKILLS

Programming Languages: Python, Bash, C#, JavaScript, SQL, Node.js

Clouds: Azure, Amazon Web Services (AWS)

Technologies/Tools: Linux, Jenkins, GitHub, Bitbucket, Docker, Ansible, Kubernetes, Azure DevOps, SonarQube, Terraform

Security Tooling: Nmap, Metasploit, Nessus, Wireshark

Log and Monitoring: Cloudwatch, DataDog, Prometheus, Grafana

WORK EXPERIENCE

DevOps Engineer

Cyberoide, Islamabad

Oct 2022 - Present

- Implemented a robust production environment on AWS, utilizing CloudFront for S3-hosted frontend, ALB for backend servers, ASG for resource management, and RDS for the PostgreSQL database.
- Set up various AWS services including RDS, Load Balancers, CloudFront, Route53, S3, KMS, IAM, and Lambda, achieving a 30% reduction in infrastructure costs.
- Orchestrated deployment of 20 microservices on ECS, optimizing scalability and resource allocation.
- Good grasp of containerization tools like Docker and orchestration tools like ECS, EKS and docker-compose.

DevOps Engineer

24Task, United Arab Emirates

Nov 2023 - Apr 2024

- Expertise in leveraging Python and various AWS services like Lambda, S3, DynamoDB, and API Gateway.
- Automates software delivery for clients using CI/CD pipelines (GitHub Actions, GitLab, Bitbucket) and ensures efficient workflows (Jenkins, GitHub Actions).
- Implements and manages security best practices to safeguard systems and data integrity across infrastructures. to design, develop, and deploy highly scalable and fault-tolerant cloud-native applications.

PROJECTS

- Full Stack Web Application Deployment Via Terraform & Ansible on AWS**
 - Deployed full-stack web applications on EC2 instances within auto-scaling groups, utilizing Elastic Load Balancer, and auto-scaling policies resulting in a 50% reduction in downtime and a 30% decrease in infrastructure costs.
 - Developed Terraform custom modules for Dev, Staging, Production environments, reducing provisioning time by 40%.
- Comprehensive GCP to AWS Cloud Migration Project**
 - Migrated 15 services and 10 terabytes of data from Google Cloud Platform (GCP) to Amazon Web Services (AWS), ensuring zero downtime and maintaining data integrity throughout the migration process.
 - Implemented cost optimization strategies resulting in a 25% reduction in infrastructure expenses post-migration, aligning resources more efficiently to meet the project's scalability and performance requirements.
- JENKINS for Complete CI/CD**
 - Configured Jenkins server automating .NET application builds, slashing deployment time by 50% and reducing manual intervention by 60.
 - Established a CI pipeline minimizing build times by 40% and increasing deployment frequency by 50.
- Web Application Deployment on ECS**
 - Containerized web applications using custom Docker files for ECS deployment.
 - Achieved a 60% reduction in resource utilization and optimized infrastructure efficiency.
- 3-Tier Application Deployment on Kubernetes**
 - Successfully deploy the three-tier application to Kubernetes for efficient container orchestration.
 - Utilized Kubernetes features to ensure scalability, reliability, and fault tolerance of the application.
